Office Action Summary

Art Unit: 1642

DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-23, 29, 37-40, drawn to a tumor specific vaccine product, classified in class 424, subclass 277.1.
 - II. Claims 24-28, 30-36, drawn to a immunogenic protein specific for an in vidual, classified in class 424, subclass 184.1.
 - III. Claims 41-~~42~~⁵⁰ *Pause*, drawn to a method of inducing an immune response, classified in class 424, subclass 131.1.
 - IV. Claims 51-53, drawn to a method producing a polypeptide, classified in class 435, subclass 69.1.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (M.P.E.P. § 806.04, M.P.E.P.. § 808.01). In the instant case, the different inventions are drawn to different structurally and chemically distinct products which have different modes of operation and have different uses. Each of the groups is capable of being used independent of the others and form patentably distinct products.
3. Inventions III-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (M.P.E.P.. § 806.04, M.P.E.P.. § 808.01). In the instant case, the different inventions are drawn to different methods.. The Groups are drawn to methods which are distinct and independent as they require different method steps, reagents, therapeutic variables and rely on different endpoints.

Art Unit: 1642

4. Invention drawn to products of Groups I or II and methods of Groups III or IV may be considered to be related as product and processes of use and making. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P..

§ 806.05(h)). In the instant case the product of the said Groups can be also used in immunoaffinity purification methods or in other biochemical studies in vitro. The process of making the invention of Group I or II can be practiced by isolation from natural sources, without the use of a recombinant technology.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the search required for the different Groups are different, restriction for examination purposes as indicated is proper.

6. Due to the numerous groups and the complexity of the groupings this written restriction is being mailed. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
